

TDD with Spring Boot

 enolive.github.io/spring-tdd

UNIT TESTS

1ST CLASS

Definition

- comes out of the box
- All features testable
- no need for 3rd party libraries and tools

WHAT ABOUT

JEE?

Antonio Goncalves

@agoncal · [Follow](#)

I've reached a point where I can test Spring code in a couple of minutes, and Java EE code in a couple of hours :o(

QUICKSTART

How to do it?

1. maven dependency `spring-boot-starter-test`
2. Annotate your tests with `@SpringBootTest`
3. Use `@ContextConfiguration` to limit your testing scope!
4. Test
5. Implement
6. Refactor
7. GOTO 4.

```
@SpringBootTest
@ContextConfiguration(classes = MyService)
class MyServiceTests extends Specification {
    @Autowired
    private MyService sut

    def "world is greeted"() {
        when: "we want a greeting"
        def result = sut.sayHello()

        then: "the world is greeted"
        result == "Hello, World!"
    }

    def "specified person #person is greeted with #expected"()
        when: "we want a specific greeting"
        def result = sut.sayHelloTo(name)

        then: "the greeting meets our demands"
        result == expected

        where:
        name      | expected
        "World"    | "Hello, World!"
        "Chris"    | "Hello, Chris!"
    }
}
```

groovy

COODIES

Test Starter comes with

- JUnit
- AssertJ
- Mockito
- Test Utilities
- JSONassert
- ...

→ ...including Spock Framework highly recommended!

TALK SCOPE

- Live Coding
- Spring Boot Project from scratch
- Fizz-Buzz
- TDD micro-cycle
- Java with Maven+Lombok for Implementation
- Spock for Testing (cause it's groovy ♥)

OUT OF SCOPE

HIPSTER STUFF

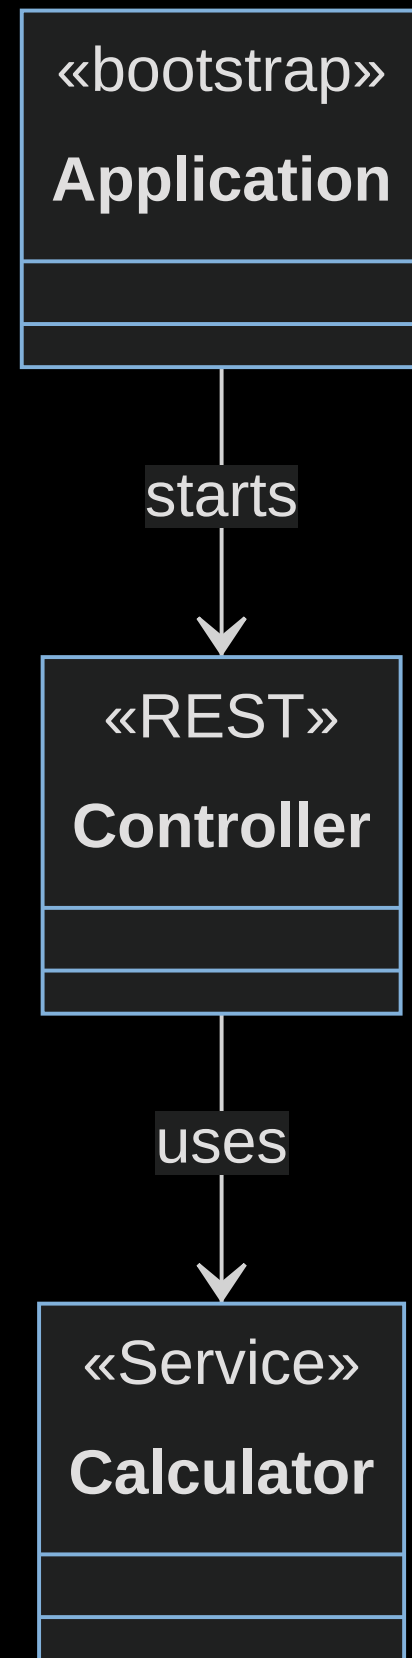

Kotlin Gradle **VAVR** Property Based Testing
Reactive Web **WebFlux** Project Reactor **Monads**
Applicatives Validation **Either** JPA JDBC
Mongo **Redis** Spring Boot Profiles
Configuration **Spring Security**

App

STRUCTURE

Let's start ....

 for joining me!
